

Photopolymer Plate Punch

Reduced Complexity, Maximum Reliability

By reducing the number of components, the system has been simplified without compromising either precision or punching power. Fewer parts mean lower wear, a reduced risk of malfunctions, and less frequent maintenance.

The result is a robust, reliable Punch that maintains consistent performance over time, ensuring smooth and efficient plate processing in any environment.

Patterns for all Major Processor Brands

Available with different patterns to match all common brand plate processors. This ensures seamless integration into your workflow and consistent results, regardless of the brand or processor model you use.

Ergonomic Operation

The BAE Punch can be triggered either with a hand switch or with a foot pedal for hands-free efficiency. The foot pedal design allows operators to work comfortably and with ease.

Universal Plate Compatibility

The BAE Punch handles a wide variety of different plate types with ease. Custom solutions are available upon request, ensuring that no matter your application, you have the flexibility you need.
